2019 UK GENERAL ELECTION BRIEFING:
EDUCATION POLICY PRIORITIES AND A LOOK INTO THE MANIFESTOS

Janine Boshoff, Héctor Espinoza, Elena Lisauskaite, Stefan Speckesser, Lei Xu
National Institute of Economic and Social Research (NIESR)

OVERVIEW

Labour, Conservatives and Lib Dems have all pledged to increase the education budget. But we ask, from early years via schools to further and higher education: What can be done to make the education system more effective and fairer? How can outcomes across different levels of education be improved? How can we reduce inequality in education success? Can education help people after losing jobs?

First, we compare the UK with other large European countries in terms of education spending and productivity of the economy. Then, we look into six education policy areas and identify key policy priorities. The last part reviews the election manifestos from this angle.

KEY FINDINGS

- Increasing early years spending to a level comparable to the European average (0.6% of GDP) is useful. Expenditure is low compared to other countries and has very high social benefits. Critically, proposals must detail how childcare will be delivered.
- Education policy must do more to remove barriers for children from poor families, improving financial support.
- Quality and financial sustainability of apprenticeships need to improve. Good quality apprenticeships must be created for people with both high and low previous skills. Developing industry links can inform the number of apprenticeship offerings at each level.
- Further Education (FE) and vocational training outside the A-Level-University way must be created.
- Fair and sustainable university education calls for a review of the funding formula.
- Reversing the decline in adult education and updating skills after job loss in an economy of accelerated structural change requires significant resources for labour market training. Public expenditure on this component must be linked to industrial policy objectives.
HOW DOES THE UK COMPARE TO OTHER COUNTRIES?

**Spending**

- Of the six large European countries, **only France spends more on education than the UK** as a percentage of GDP (6.1% of GDP compared to 5.6%, Figure 1).

- Combined spending on primary and lower secondary education is the highest (3.8%), slightly higher than in France (3.5%), and much higher than in Germany.

- However, spending on early years compares very unfavourably. France spends 3.5 times more on early childhood and pre-primary education. Not included here, but an important benchmark: **Sweden’s public expenditure for this is eight times the British:** 1.8% of GDP on early childhood plus another 1.3% of GDP on pre-primary education.

**Adult skill outcomes**

- The share of adults (25-65) having very low skills is going down in all countries, but the **UK still has a larger share of people without more than secondary school education than Poland or Germany** (Figure 2). This mainly results from relatively larger proportions having achieved vocational education by age 18 to 19.

- The **progress towards zero low skilled adults has levelled off** in recent years in Germany and the UK. France has been much more successful over the last 20 years.
Barriers

- **Coming from a poor family is the main barrier for young people** to gain skills.

- For adults, cost is the key obstacle (Figure 3): 45% of British adults aiming for better skills but unable to start adult education said that the costs were too high (21% in France). 60% were too busy (33% in France). 30% said there was no appropriate course locally, ten times more than in Poland.

- Long working hours, difficulties of funding adult education and lack of availability are the key barriers.

**Labour productivity**

- GDP per hour worked, an indicator of labour productivity, has remained near its pre-crisis levels in the UK (Figure 4).

- Since 2008, UK labour productivity has been outperformed by its closest European peers. Instead, it is growing only slightly above the lowest performing country (Italy).

- Labour productivity is closely linked to the skills of the workforce, and the UK’s poor performance suggest there is a mismatch between skills supplied and those demanded by employers.

*Figure 4. Development of labour productivity*

*Poland excluded from graph as growth was much higher than in “old” EU States

KEY POLICY AREAS

1) Early years and young children

Situation

- **A complicated set of financing instruments** (See Figure 5) subsidise nursery education, largely from age three (with more help for people on low incomes). Care, learning and welfare are strictly regulated; some services offering extra help for poor families (Sure start) saw spending cuts.

- Early years education has large social benefits:
  - Development of children, savings in healthcare costs, **positive long-term impact on learning** in schools and beyond (implications for adult earnings, social mobility, etc.).
  - **Positive labour market impact for women**, especially from deprived households

- Public expenditure on early years in the UK is low, see above, and extension of provision would create large benefits.

</tbody>
</table>

Policy priorities

- Increasing spending, specifically to help disadvantaged families, and from earlier.

- Detail how the extension of early years can be delivered/the system can be more integrated.
2) School attainment and education progression

Situation

- 50% leave schools without “good” GCSEs. At age 18, only half of all young people are ready to start university or skilled work (having achieved A-Levels/Advanced vocational), half are not.

- Those with good GCSEs and then A-Levels progress well (see the increasing shares with bachelor or master’s degrees in Figure 6 below); those with low GCSE marks are stuck.

- In adult age, education outcomes and labour market opportunities are unequally distributed: One third of school-leavers had gained highest skills until age 28, 40% have at best GCSEs or lower technical education. And: The situation is worse for young people from poor families.

Figure 6. Highest qualifications of school leavers* until age 27/28

Policy priorities

- Improving GCSE attainment, specifically for young people from poor families: Helping poor families with targeted financial support will improve education and social mobility.

- Improving post-16 learning for those with low GCSE’s, so they can make transitions to higher level skills in the long run.

- Reversing funding cuts: Relative to per pupil spending in primary schools, expenditure per student in secondary schools has been decreasing since the 1990s. At given/increasing numbers of students, this will not allow secondary education to meet address challenges to improve attainment, offer attractive careers to teachers and improve basic education to learn for future high-skilled jobs.
3) **Apprenticeships**

**Situation**

- For people of all ages, apprenticeships are the main route to *gain skills while working*.

- Government reforms tried to increase availability and attractiveness (funding, introducing new “standards”, targets for public sector, etc.), but *quality, duration, drop-out, achievements and earnings benefits resulting from apprenticeships are really very different in reality*.

- **And:** *Only two thirds of starters achieve the apprenticeship qualifications*.

- Large decreases in lower level apprenticeships and *high growth in higher apprenticeships* (see Figure 7) create *new challenges*: Higher apprenticeships often replace existing programmes for graduates, *exhaust training budgets quickly*, have a long duration and a higher risk of non-completion. Also, *they don’t benefit people with low level qualifications*.

**Figure 7. Starts and achievements of apprenticeships**

![Figure 7](https://example.com)

**Policy priorities**

- **Improving quality of apprenticeships at all levels.** 12-months durations are short compared to other countries and *every apprenticeship should offer attractive education credentials* (not only competence assessment), so people gain versatile skills and progress in education. The effectiveness of the whole system needs to be reviewed.

- Higher apprenticeships currently don’t benefit *young people, those with low qualifications, or small businesses*. Make sure apprenticeships help these people, too!

- **Improving achievement of apprenticeships** by providing the right skills, helping people form realistic expectations with better information, careers advice, quality control and support/mentoring for apprentices.
4) Technical and professional education

Situation

- Figure 8 shows how opportunities for people aiming for higher skills and better jobs differ if they have vocational qualifications or A-Levels:
  - Most A-Level have a clear route to higher skills by taking degree courses.
  - Students with good technical qualifications progress far less often: In the Sankey diagram (Figure 8), there is much less progression after Level 3 vocational education indicated by a large proportion of this group not connected to any further or higher education.

- High-level technical education (Level 4/5) offers an alternative route of advanced education, offering good job and earnings prospects especially in technology and engineering jobs, but hardly anyone takes these courses or perhaps even knows about them.

- The recent Post-18 review of education and funding identified the lack of higher technical education as a main cause of UK’s skill gaps and also to reduce severely “opportunities for people who are unable, for whatever reason, to progress directly from Level 3 to Level 6”

- In 1990, spending per student in FE was 50% higher than in secondary schools, in 2015 it was around 10% lower at £5,600 per student.

Policy priorities

- Implementing recommendations of various reviews: There should be a better offer for people with technical qualifications, who want to increase skills. Higher technical education should offer widely acknowledged qualifications. Progression routes need to be clear.

- Removing relative disadvantages in funding higher technical compared to higher academic (= degree course) education.
Figure 8. Education progression*

*Cohort with GCSE’s in 2002/03; Source: Espinoza and Speckesser (2019), alternative representation
5) Universities

Situation

- Tuition fees of £9,250 resulting in high indebtedness of students, reaching on average £57,800 after three-year course at university. There are no maintenance grants, which further negatively impact poorer students.

- While recent research suggests significant earnings gains from university education, graduates in some subjects like creative arts, English or philosophy have indeed quite low earnings, which can only recover part of the debt over the working life.

- As approximately 45% of loans are not repaid, the Office for National Statistics ONS changed accounting rule to reflect its impact on the overall budget deficit, see Figure 9.

Figure 9. Additions to net debt from student loans, % of GDP

![Figure 9. Additions to net debt from student loans, % of GDP](image)

Sources: Page 92 of Office for Budget Responsibility, 2018

Policy priorities

- Implementing recommendations of the Augar review about the reintroduction of maintenance grants for students from disadvantaged families and a reduction of the interest rate applied to loans.

- In the longer term, replacing the system, which creates a funding gap eventually recovered by tax payers by a system offering sustainability of university funding, which also reflects that numbers of students are likely to increase (by 10% until 2025).

- Making sure that funding mechanisms do not distort the universities’ decision to invest in subjects, which are of high value and crucial for innovation in the longer term.
6) Adult continued education and re-skilling

**Situation**

- **Further education and training are key instruments to help people affected by job loss in mid-career** to avoid unemployment, to leave it again quickly and to get better jobs – compared to other support programmes like *employment retention or subsidised employment*.

- **As industrial change accelerates labour market change** (decarbonisation, automation, production and services moving abroad, etc.), *programmes need to expand* in the 2020s.

- **However, participation of training in the workplace and adults aiming for qualification developed disappointingly**, see Figure 10:
  - The proportion of 16-65-year old employees in training has been falling consistently (left)
  - Even more decline is observed for people aiming for recognised qualifications (right)

**Figure 10. Training in the workplace and studying for recognized qualifications**

![Training in the workplace and studying for recognized qualifications](image_url)

*Source: UK Labour Force Survey, NIESR calculations*

**Policy priorities**

- **Improving support**: The *Retraining Scheme*, which is only tested in some areas, and support for the hardest-to help claimants of unemployment benefits are much more limited than support for labour market training available across the OCED (somewhere between 0.5-1% of GDP).

- **Creating best value for the skills investment** for individual circumstances: *Programmes must offer the greatest benefit to cost ratio and clear labour market value*, i.e. sufficiently long re-employment for people after training to generate a positive return on investment.

- **Targeting subsidies carefully to those in need**, i.e. a risk of losing jobs or in industries affected by structural change rather than offering unconditional funding.
## WHAT’S IN THE MANIFESTOS

<table>
