

Press Release

GDP growth of 0.7 per cent in 3 months ending in January 2017

Embargo until 15.00 hours on 10th February 2017

Our monthly estimates of GDP suggest that output grew by 0.7 per cent in the three months ending in January 2017 after growth of 0.6 per cent in the three months ending in December 2016.

Oriol Carreras, Research Fellow at NIESR, said “*Our estimates suggest economic output in the three months ending in January 2017 was 0.7 per cent higher than in the previous three months. Driving growth is strong momentum in consumer spending combined with a pickup in output growth of manufacturing.*”

NIESR’s latest quarterly forecast (published 1st February 2017) projected GDP growth of 2 per cent per annum for 2016 and 1.7 per cent in 2017 (see [here](#) for the associated press release).

Technical notes: Our track record in producing early estimates of GDP suggests that our projection for the most recent three-month period has a root mean squared error (RMSE) of 0.224% point (for the full sample period 1999Q3-2015Q4) when compared to the first estimate produced by the ONS. For the period 2008Q1 to 2015Q4 the RMSE is 0.290% point. The impact of the adverse weather in 2010Q4 is a noticeable outlier. Excluding 2010Q4 from the analysis, the RMSE for the full sample period is 0.188% point, and for 2008Q1 to 2015Q4 the RMSE is 0.231% point. These comparisons can be made only for complete calendar quarters. Outside calendar quarters the figures are less reliable than this.

A paper describing the methodology used to produce the data was published in the February 2005 volume of the *Economic Journal*:

Mitchell, J. Smith, R. J., Weale, M. R., Wright, S. and Salazar, E. L. (2005) ‘An Indicator of Monthly GDP and an Early Estimate of Quarterly GDP Growth’, *Economic Journal*, No. 551, pp. F108-F129.

- Available from: [http://onlinelibrary.wiley.com/journal/10.1111/\(ISSN\)1468-0297](http://onlinelibrary.wiley.com/journal/10.1111/(ISSN)1468-0297)

A paper describing the methodology used to produce the data for the inter-war period was published in the October 2012 volume of *Explorations in Economic History*:

Mitchell, J., Solomou, S. and Weale, M. (2012) ‘Monthly GDP estimates for inter-war Britain’, *Explorations in Economic History*, Vol. 49, No. 4, pp. 543-556.

- Available from: <http://www.journals.elsevier.com/explorations-in-economic-history/>

From April until October 2006 our estimates were computed using the Index of Services published by ONS. However this monthly series shows considerable volatility which has caused us some problems in estimating GDP. From our November 2006 press release we have therefore reverted to using a model of private services output based on indicator variables. This means that, while all our figures for calendar quarters are fully coherent with ONS data, our estimates of monthly private service output are not. The series can be thought of as indicating the underlying value of the ONS series.
