

**NATIONAL INSTITUTE OF ECONOMIC AND SOCIAL RESEARCH
ESTIMATES OF MONTHLY GDP**

Embargo until 15.00 hours on 11th March 2014

Our monthly estimates of GDP suggest that output grew by 0.8 per cent in the three months ending in February after growth of 0.7 per cent in the three months ending in January 2014. This implies that output is less than 1 per cent below its pre-recession peak (January 2008) and we expect this peak will be recovered over the course of 2014. We do not anticipate that the Bank of England's MPC will adjust interest rates until the second quarter of 2015.

Note: NIESR's latest quarterly forecast (published 7th February 2014) projects GDP growth of 2.5 per cent per annum in 2014 and 2.1 per cent in 2015.

Figure 1. The profile of recession and recovery

Notes: Calculated from centred three-month moving averages of monthly GDP, the effect of the miners' strike in 1921 is excluded from the 1920-1924 profile (the strike started on 31st March 1921 and ended on 28th June 1921). The effects of the miners' strike and the General Strike in 1926 are also excluded.

The National Institute interprets the term "recession" to mean a period when output is falling or receding, while "depression" is a period when output is depressed below its previous peak. Thus, unless output turns down again, the recession is over, while the period of depression is likely to continue for some time. We do not expect output to pass its peak in early 2008 until 2014.

Our track record in producing early estimates of GDP suggests that our projection for the most recent three-month period has a root mean squared error (RMSE) of 0.234% point (for the full sample period 1999Q3-2013Q4) when compared to the first estimate produced by the ONS. For the period 2008Q1 to 2013Q4 the RMSE is 0.334% point. The impact of the adverse weather in 2010Q4 is a noticeable outlier. Excluding 2010Q4 from the analysis, the RMSE for the full sample period is 0.195% point, and for 2008Q1 to 2013Q4 the RMSE is 0.258% point. These comparisons can be made only for complete calendar quarters. Outside calendar quarters the figures are less reliable than this.

A paper describing the methodology used to produce the data was published in the February 2005 volume of the *Economic Journal*:

Mitchell, J. Smith, R. J., Weale, M. R., Wright, S. and Salazar, E. L. (2005) 'An Indicator of Monthly GDP and an Early Estimate of Quarterly GDP Growth', *Economic Journal*, No. 551, pp. F108-F129.

A paper describing the methodology used to produce the data for the inter-war period was published in the October 2012 volume of *Explorations in Economic History*:

Mitchell, J., Solomou, S. and Weale, M. (2012) 'Monthly GDP estimates for inter-war Britain', *Explorations in Economic History*, Vol. 49, No. 4, pp. 543-556.

Available from: <http://www.journals.elsevier.com/explorations-in-economic-history/>

From April until October 2006 our estimates were computed using the Index of Services published by ONS. However this monthly series shows considerable volatility which has caused us some problems in estimating GDP. From our November 2006 press release we have therefore reverted to using a model of private services output based on indicator variables. This means that, while all our figures for calendar quarters are fully coherent with ONS data, our estimates of monthly private service output are not. The series can be thought of as indicating the underlying value of the ONS series.

For more information please telephone NIESR on 020 7222 7665.
