

NIESR Monthly Wage Tracker

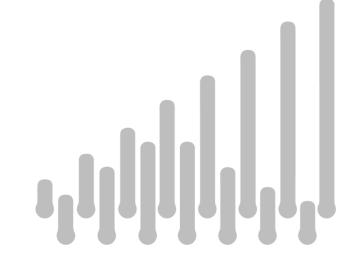

Cost-of-living squeeze ramps up as fall in real wages continue

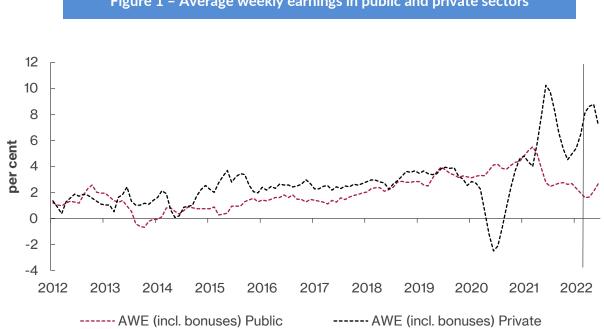

Kemar Whyte

May 2022

"This morning's announcement from the ONS indicates the squeeze on UK living standards intensified as regular wage growth fell further behind the rate of inflation. With inflation expected to reach 8.3% in the fourth quarter of this year and the Health and Social Care levy being introduced, workers are facing an extraordinary decline in their real disposable incomes. The MPC are raising interest rates to help bring inflation back to its 2.0 per cent target. However, there is a chance that pay demands could ramp up if workers' expectations are that inflation will remain higher for longer, potentially triggering a price-wage spiral"

Dr Kemar Whyte Senior Economist, NIESR

Main Points

- NIESR's wage tracker predicts that average weekly earnings growth will grow at 6.1 per cent in the second quarter of 2022, after increasing by 7.0 per cent in the first quarter. The strong growth is underpinned by a combination of high bonus payments and increasing regular pay.
- We maintain our AWE forecast for total pay in the private-sector to grow at 6.7 per cent in the second quarter of this year, with growth in regular pay expected to be slightly lower than in the first quarter of this year.
- We expect public-sector total AWE growth to reach around 3 per cent in the second quarter of the year.

Employment

The latest <u>Labour Force survey (LFS)</u> estimates suggest the labour market continues to recover, with the employment rate increasing on a quarterly basis and the unemployment rate decreasing. The employment rate was estimated at 75.7 per cent, marginally higher than the previous 3-month period but still below the pre-pandemic levels. The unemployment rate decreased by 0.3 percentage points on the quarter to 3.7 per cent. The economic inactivity rate has increased marginally on the quarter to 21.4 per cent.

Pay

The growth rate in average weekly earnings including bonuses (AWE) in Great Britain was 7.0 per cent in the three months to March 2022. In real terms, growth in total pay was 1.4 per cent in the three months to March 2022, according to latest ONS estimates. Strong bonus payments underpin the positive real total pay growth.

Tight labour market means starting pay remain on the surge. The latest <u>KPMG and REC report</u> on Jobs indicates that strong competition for scarce candidates placed further upward pressure on pay, with the pace of starting salary inflation reaching close to the survey record seen in March. The report also suggests that the overall availability of candidates fell for the fourteenth consecutive month in April, driving substantial increases in starting pay for both permanent and temporary workers. There was a further sharp increase in overall vacancies in April, despite the growth rate slightly easing since March. The latest ONS estimates suggest that job vacancies rose to a new record of 1,295,000 in February 2022 to April 2022.

Private-sector regular AWE growth was 4.8 per cent in the 3 months to March 2022, and 8.2 per cent if we include bonuses. We forecast regular AWE growth to decrease moderately to 4.4 per cent in the second quarter of 2022. Including bonuses, AWE growth would be 7.2 per cent in the private sector.

Public-sector total AWE growth declined from a peak of 5.5 per cent in the first quarter of 2021 to 1.6 per cent in the 3 months to March 2022. Our forecast for the second quarter of this year is for public-sector total growth to be around 2.7 per cent.

Caveat

NIESR's Wage Tracker includes predictions for regular pay and bonus payments for the whole economy, as well as forecasts for private and public sector wages. The Wage Tracker exploits information from key macroeconomic indicators, including labour market trends, building also on information from monthly GDP nowcasts produced by NIESR's GDP Tracker and survey evidence, such as labour costs in the manufacturing and service sectors from the Bank of England Agents Scores. The wage models also capture the interaction between private and public pay, shown to be relevant in work done by NIESR.

To check how our methodology would work in real time we have produced judgement-free forecasts of earnings growth for the period between July 2010 and October 2018. For whole economy earnings, the root mean square error is 0.2 percentage points for the measure excluding bonuses and 0.4 percentage points for the measure including bonuses. So, on average, our projections are likely to have an error of 0.2/0.4 percentage points above or below the forecasts we publish. These numbers indicate the degree of uncertainty around the point forecasts produced by the models at each point in time. The errors are greater for the measure of earnings including bonuses because bonus payments, particularly in the private sector, are subject to short-term volatility. In practice, we add residuals reflecting our judgement so the error bands may be larger or smaller.

Forecast schedule

The NIESR Wage Tracker provides a rolling monthly forecast for earnings growth. The ONS produces an estimate of Average Weekly Earnings (AWE) for any particular quarter some 40 days after the end of the quarter. The NIESR Wage Tracker will publish AWE forecasts 5 months ahead of the ONS release for the reference quarter, updating that forecast four times before the official data is out, similar to the monthly GDP Tracker schedule.
